

VerteX™ GALLERY 3D DEMO FAQ NEWS **BUY IT NOW**

SELECT YOUR CONFIGURATION

50% Ceiling, 50% Rear  
60% Ceiling, 40% Front  
80% Ceiling, 20% Front  
98% Ceiling, 2% Front  
100% Ceiling

Versatility is what helps to make the VerteX™ so powerful.

Different lighting effects can be achieved in seconds, using just a twist, turn or pull, with one free hand.

The two adjustable panels can be rotated or removed, to target lighting in any direction.

These configurations demonstrated here represent only a few of a multitude of possibilities. The actual number of potential configurations is limited only by your creativity and imagination. The percentages shown are approximate, for purposes of illustration.

It's easy! All you really need to take great pictures is to use one panel, angled vertically, as shown above, when your subject is within five feet. White panel facing subject.

NOTE:

- This creates ceiling bounce and slight forward fill light.
- If more fill light is needed, then *thumb-shift* to the configuration on page 2.
- This works for both Landscape and Portrait orientations.

### Thumb-Shift Ratio Control™

When your subject is more than five feet away or you have a group of subjects, use your thumb to angle the single panel as shown here on page 2. Again, white panel facing subject.
